An Outstanding New Corn

Hybrid Sweet Corn, Top Cross Golden Pearl

This remarkably fine new Top Cross of our own introduction is P-39 (Purdue Bantam) crossed onto our popular Early Pearl. The result is a mixture of yellow and white kernels borne on a cob 6½ to 7 inches long, with 12 to 14 rows of the most succulent, delicious Corn you have ever tasted, about the maturity period of Golden Bantam. It inherits all of the excellent qualities of our Early Pearl with the added size, color variation and deeper kernel size of Purdue Bantam, and all of the vigor, strength and uniformity as well as the high production imparted to all Corns by hybridization. In case you do not like the idea of yellow and white kernels on the same cob, let us assure you that this does not detract from its pleasing appearance on the table, but in fact enhances it. The glistening white of the Early Pearl and the rich yellow of the Purdue Bantam makes an attractive appearance. We know you will be more than pleased to have the additional size and yield of this new Top Cross by comparison with the smaller size and production of our Early Pearl. Do not fail to include at least a packet of this for trial in your garden.

HART'S LAWN GRASS SEEDS

For Better Lawns

5 QUALITY BRANDS—BOXES IN 1, 2 and 5 LBS., ALSO AVAILABLE IN 10, 25, 50 and 100-LB. BAGS

This is the modern way to buy lawn seed because you can buy a dependable brand with the quality and contents clearly labeled. You'll like the box because it's easier to handle and protects unused seed better. We offer these 5 quality brands boxed.

HART'S STANDISH PARK (GOLD SEAL) meets the exacting requirements of the State of Connecticut and is fully qualified to bear the State Seal of "Highest Quality." The basic turf grass seeds used are as nearly 100% pure as the most modern cleaning machinery can make them. The lawn resulting from this seed will present an ideal appearance.

HART'S BLUE SEAL bears the "High Quality" Seal of the State of Connecticut and produces dense, thick turf with a thrifty root system which insures long life and resistance to rough usage. While it does not meet the exacting standards of **Gold Seal**, it produces a turf similar to that fine blend. For best results, sow in Spring or Fall.

HART'S 1634 RED SEAL is rated "Good Quality" under State specifications and contains a higher percentage of quick-growing grasses than the other Seal Blends, although the permanent grasses are in somewhat smaller supply. Highly valuable for late Spring or Summer seeding. Produces excellent turf under adverse conditions.

HART'S ELM TREE LAWN SEED is named for the famous Wethersfield Elm. The mixture though similar to that of the State Seal blends does not contain the percentage of fine bladed grasses. It is rapid growing yet permanent and produces a rich, velvety turf. May be sown at any season, under all conditions.

HART'S SHADY PLACE is a very superior blend of hardy, deep-rooted grasses designed for permanent turf on lawns which have more shade than sun. Will give good results under trees or on the north side of buildings.

We also offer:

EVERGREEN. Satisfactory for the average lawn, but simply does not contain as large a percentage of the finer bladed, more desirable grasses, nor is the purity quite as high as in the State Seal mixtures.

POOR or SANDY SOILS BLEND will thrive on soils of that type.

TERRACE SOD is useful on embankments and steep slopes.

DEEP SHADE is for use in densely shaded locations only.

SPECIAL BENT AND SPLENDOR (GOLD SEAL) are adapted for spots where an ultra fine turf is desired.
